

# Exercises

---

Create a new subfolder in your `LearnToCode\Workbook1` folder named `Mod04` to hold the exercises for this module. The code for each exercise below should be in its own subfolder under `Mod04`.

## **EXERCISE 1**

Modify the `SandwichShop` from the last exercise to allow customers to order a "loaded" sandwich (double everything).

Prompt the user for the size of the sandwich (1 or 2):

- 1: Regular: base price \$5.45
- 2: Large: base price \$8.95

Prompt the user if they would like the sandwich "loaded" (yes/no). If so there is an additional cost for a loaded sandwich

- Regular: \$1.00
- Large: \$1.75

Prompt the user for their age:

- Student (17 years old or younger) – receive a 10% discount
- Seniors (65 years old or older) – receive a 20% discount

Display the cost of the sandwich to the screen
