

# Exercises

---

All projects should be created in the LearnToCode \Workbook2\Mod01 folder.

## EXERCISE 3

Create a Java application named **AddressBuilder**. You will prompt the user for their Billing and shipping addresses. Use a **StringBuilder** to build a single **variable** that holds all of the address information. Then print the information to the screen.

Sample application: The bold text is an example of user input.

Please provide the following information:

Full name: **Grover Smith**  
Billing Street: **123 Main Street**  
Billing City: **Middleton**  
Billing State: **TX**  
Billing Zip: **75111**  
Shipping Street: **456 Big Sky Blvd**  
Shipping City: **Outer Rim**  
Shipping State: **TX**  
Shipping Zip: **75333**

Grover Smith

Billing Address:  
123 Main Street  
Middleton, TX 75111

Shipping Address:  
456 Big Sky Blvd  
Outer Rim, TX 75333
