

Exercises

If you have not done so already, create a new subfolder in your LearnToCode\Workbook1 folder named Mod02.

EXERCISE 1

Create a new folder in the Mod02 folder named MyCodingSkills. This will be the project folder for a Java application. You will use your java application to list at least 8 programming technologies or skills that you know.

1. Create a new class named `MyCodingSkills`. Remember it must be in a .java file of the same name.
2. Within it, create a `main` method.
3. Within the `main()` method, call `System.out.println()` at least 8 times. Each time, print one programming technology you know and understand.
4. Compile the program. If you have no errors, then run the program. Admire your output!
